Web based timesheet

DbNetTime is a web based timesheet that provides a simple and efficient means for users to record time against cost centres, projects and tasks combined with a powerful real-time reporting engine that allows recorded time to be analysed

Simple for users...

- Quickly and easily record time.
- A choice of Weekly, Daily or Quick Entry timesheets to suit the way you work.
- Record notes against each time.
- Limit the projects and tasks displayed for selection to those which have been recently used.

Simple for administrators...

- Easy to install. Easy to use. Web based time recording. Run from anywhere. No client installation required.
- Powerful real-time reporting. Generate a range of detailed reports in a couple of clicks, providing in-depth reporting and analysis.
- Configure text to match particular organisational teminology or a specific language.
- Simple administration with easy project and task setup and maintenance.
- Powerful workflow features to simplify the monitoring of timesheet completion and online approval.
- Absence scheduling keeps track of employee holiday, leave, offsite working etc.
- Configure DbNetTime applications to record your additional data
